MANUAL TRANSMISSIONS

Weller's remanufactured manual transmissions are engineered to deliver exceptional reliability and performance.

DISASSEMBLED

- Each unit is completely disassembled by skilled technicians.
- Critical components such as countershafts and main shafts are meticulously inspected, with gears rolled together to detect any damage.

REMANUFACTURED

- All bearings, gaskets, seals, synchronizers, airlines, fittings, hoses and clamps are replaced.
- Components are reused only if they meet Weller and OEM inspection standards.

INSPECTED AND TESTED

- Each unit is dyno tested under load, including air leak checks.

This attention to detail and quality control reflects Weller's commitment to durability, precision, and customer satisfaction.

DIFFERENTIALS & DRIVESHAFTS

Weller's remanufactured differentials are built to meet the highest standards of durability and performance.

DISASSEMBLED

- Each unit is completely disassembled and all bearings and seals discarded.
- Components meticulously cleaned using industrial washers and saturation tanks.

REMANUFACTURED

- Assembled precisely to preload settings using torque guns and custom spacers.
- Bearings are pressed on using custom tooling to prevent damage; each unit receives a new bearing kit and spacer.
- Components are reused only if they meet Weller and OEM inspection standards.

INSPECTED AND TESTED

- Each unit undergoes a two-step inspection process: a 35-point bench check and an 80-point digital final inspection.

This thorough approach ensures reliability, quick exchange availability, and compatibility.

DYNO TESTING

Our transmissions are rigorously tested under realistic load simulations on state-of-the-art dynamometers. This approach guarantees proper torque, leak-free performance, accurate shifting, and optimized oil flow.

ENSURING FUNCTIONALITY

The test replicates the demands placed on a transmission during operation, checking if it shifts gears smoothly, delivers the expected power output, and operates within normal temperature ranges.

QUALITY CONTROL

Rebuilt transmissions in particular undergo dyno testing to verify the quality of the rebuild process. This ensures they meet or exceed factory specifications for pressure, performance, and minimize the risk of leaks or malfunctions after installation.

DIAGNOSTICS

Dyno testing can pinpoint issues with a transmission, such as abnormal noises, vibrations, or problems with the hydraulic system or clutch packs.

CALIBRATION

The test allows technicians to fine-tune the transmission's operation, including setting optimal shift points and pressures for improved performance and efficiency.
